Dev Fullstack Test Case Study

Task: Create an Next.js app connected to any other service

Create a next.js app and use one or more api services (weather, movie, games, etc) to use it on your app. There are some **minimal** requirements:

- Use Next.js and Typescript
- Fetch data and store it on any database you want
- At least the ability the search the data, but you are free to do more
- Use Tailwind for styling

Please send with the submission of this test a **github/gitlab link** and any other document as **attachments** on your **email**, with your **name** and **date**.
